Flightcom Introduces the 403LSA 2-place Stereo Intercom

PORTLAND, Ore., July 27, 2009 — Flightcom Corporation, a leader in the development and production of headsets and intercoms for the aviation, military and ground support industries introduces the 403LSA intercom at the 2009 AirVenture Oshkosh, July 27 – August 2. Flightcom's 403LSA is a 2-place stereo voice activated intercom designed for Light Sport Aircraft (LSA). It is simple to operate and easy to use. The 403LSA enhances the fun of flying, as well as safety, by optimizing communication clarity.

The 403LSA is a 2-place stereo, voice activated intercom designed on the same platform as Flightcom's classic 403. It features auxiliary input with auto-muting to prevent missing mission critical radio or intercom communication. The 2-position, radio transmit capability allows both seats to communicate via the radio. An optional 15 foot prewired harness is also available for quick and easy installation.

Van's Aircraft, located in Aurora, Oregon, recently selected the 403LSA as their standard intercom in the RV-12 light sport aircraft for its high-performance, reliability and ease of installation. The RV-12 is a two-seat all-metal side-by-side airplane with a large cabin that seats the occupants ahead of the wing spar for maximum room and superb visibility. The RV-12 has all the performance the Light Sport Category permits as well as excellent handling qualities at all speeds.

Flightcom Corporation

Since 1983, Flightcom Corporation has manufactured headsets, intercoms and related accessories for the general and corporate aviation markets, as well as for military and ground support applications. A leading manufacturer of cockpit communications, Flightcom's products are distributed worldwide through an extensive dealer network. Flightcom is located in Portland, Oregon.
